

MCQs: Emerging Trends (Class XI – Chapter 3)

1. Computers have been around for:

- A. A few years
- B. A decade
- C. Quite some time
- D. Only after the internet

Answer: C

2. New technologies and initiatives emerge:

- A. Once a year
- B. Every five years
- C. Occasionally
- D. With each passing day

Answer: D

3. To understand existing technologies better, we must:

- A. Ignore new developments
- B. Focus only on old systems
- C. Keep an eye on emerging trends
- D. Avoid technology

Answer: C

4. Many new technologies introduced daily:

- A. Always succeed
- B. Never succeed
- C. Either fade away or prosper
- D. Are all adopted

Answer: C

5. Technologies that gain popularity and persist over time are called:

- A. Old technologies
- B. Failed initiatives
- C. Emerging trends
- D. Traditional systems

Answer: C

6. Emerging trends are described as:

- A. Outdated tools
- B. State-of-the-art technologies
- C. Temporary solutions
- D. Experimental failures

Answer: B

7. Emerging trends mainly impact:

- A. Agriculture only
- B. Hardware manufacturing
- C. Digital economy and digital societies
- D. Manual labour

Answer: C

8. Artificial Intelligence helps smartphone maps by analysing:

- A. Stored maps only
- B. Historical routes
- C. Real-time data like traffic congestion
- D. Satellite images only

Answer: C

9. Automatic tagging of friends in photos is an example of:

- A. Robotics
- B. Big Data
- C. Artificial Intelligence
- D. Cloud Computing

Answer: C

10. Siri, Google Now, Cortana and Alexa are examples of:

- A. Search engines
- B. Programming languages
- C. Intelligent digital personal assistants
- D. Web browsers

Answer: C

11. These digital assistants are powered by:

- A. IoT
- B. Robotics
- C. Artificial Intelligence
- D. Blockchain

Answer: C

12. Artificial Intelligence aims to simulate:

- A. Mechanical intelligence
- B. Natural intelligence of humans
- C. Animal behaviour
- D. Electrical signals

Answer: B

13. An intelligent machine imitates human cognitive functions like:

- A. Eating and sleeping
- B. Learning, decision-making and problem-solving
- C. Breathing
- D. Physical strength

Answer: B

14. AI systems reduce human intervention by:

- A. Removing computers
- B. Creating a knowledge base
- C. Ignoring data
- D. Using hardware only

Answer: B

15. A knowledge base consists of:

- A. Programs only
- B. Hardware components
- C. Facts, assumptions and rules
- D. Images and videos

Answer: C

16. AI systems make decisions based on:

- A. Random guesses
- B. Knowledge base
- C. Manual input only
- D. Internet speed

Answer: B

17. AI systems can improve decisions by learning from:

- A. Future predictions
- B. Random inputs
- C. Past experiences or outcomes
- D. Errors only

Answer: C

Machine Learning

18. Machine Learning is a subsystem of:

- A. Robotics
- B. Cloud Computing
- C. Artificial Intelligence
- D. Big Data

Answer: C

19. In Machine Learning, computers learn from:

- A. Instructions only
- B. Data
- C. Hardware
- D. Electricity

Answer: B

20. Machine Learning uses which techniques to learn from data?

- A. Mechanical techniques
- B. Electrical techniques
- C. Statistical techniques
- D. Optical techniques

Answer: C

21. Machine Learning does NOT require:

- A. Data
- B. Algorithms
- C. Explicit programming for every task
- D. Training

Answer: C

22. Machine Learning algorithms are also called:

- A. Programs
- B. Models
- C. Functions
- D. Compilers

Answer: B

23. Models are first trained using:

- A. Testing data
- B. Random data
- C. Training data
- D. Live data

Answer: C

24. Models are tested using:

- A. Training data
- B. Testing data
- C. Garbage data
- D. Unknown data

Answer: B

25. Models are used for prediction when they achieve:

- A. Maximum speed
- B. Zero error
- C. Acceptable accuracy
- D. Hardware efficiency

Answer: C

26. After training, models predict outcomes for:

- A. Known data only
- B. New and unknown data
- C. Old records
- D. Hardware logs

Answer: B

Natural Language Processing (NLP)

27. Predictive typing is an example of:

- A. Machine Learning
- B. Robotics
- C. Natural Language Processing
- D. Virtual Reality

Answer: C

28. Spell checking features belong to:

- A. Big Data
- B. NLP
- C. IoT
- D. Grid Computing

Answer: B

29. NLP deals with interaction between:

- A. Humans and animals
- B. Computers and machines
- C. Humans and computers
- D. Robots and robots

Answer: C

30. NLP uses which type of languages?

- A. Programming languages
- B. Machine languages
- C. Human spoken languages
- D. Assembly languages

Answer: C

31. Searching the web using voice is possible because of:

- A. Robotics
- B. IoT
- C. NLP
- D. Blockchain

Answer: C

32. NLP allows conversion between:

- A. Binary and decimal
- B. Text-to-speech and speech-to-text
- C. Image-to-video
- D. Audio-to-image

Answer: B

33. Machine translation refers to:

- A. Machine repair
- B. Translating code
- C. Translating text from one language to another
- D. Translating images

Answer: C

34. Automated customer service uses:

- A. Robotics only
- B. NLP
- C. VR
- D. IoT

Answer: B

35. Automated customer service helps users with:

- A. Hardware installation
- B. Queries and complaints
- C. Programming
- D. Network setup

Answer: B

Immersive Experiences

36. Immersive experiences stimulate:

- A. Only vision
- B. Only sound
- C. Human senses
- D. Computers

Answer: C

37. Immersive experiences make interaction more:

- A. Boring
- B. Realistic and engaging
- C. Complex
- D. Mechanical

Answer: B

38. Driving simulators are used mainly for:

- A. Entertainment
- B. Gaming
- C. Training
- D. Networking

Answer: C

39. Immersive experiences can be achieved using:

- A. IoT and AI
- B. VR and AR
- C. Big Data
- D. Cloud Computing

Answer: B

Virtual Reality (VR)

40. Virtual Reality presents users with:

- A. Real information only
- B. Made-up or non-real information
- C. Text-based data
- D. Statistical data

Answer: B

41. Virtual Reality is:

- A. Two-dimensional
- B. Three-dimensional computer-generated environment
- C. Hardware device
- D. Network protocol

Answer: B

42. VR allows users to:

- A. Only watch
- B. Only hear
- C. Interact and explore the environment
- D. Read text only

Answer: C

43. VR experience is achieved using:

- A. Mobile phones
- B. Projectors
- C. VR headsets
- D. Routers

Answer: C

44. VR enhances realism by promoting:

- A. Text only
- B. Sound, smell, motion, temperature
- C. Light only
- D. Colour only

Answer: B

45. Virtual Reality applications include:

- A. Gaming and military training
- B. Only gaming
- C. Only entertainment
- D. Only education

Answer: A

Augmented Reality (AR)

46. Augmented Reality involves:

- A. Creating a new world
- B. Replacing reality
- C. Superimposing digital information on physical surroundings
- D. Removing physical world

Answer: C

47. AR adds which components to the physical world?

- A. Mechanical components
- B. Electrical circuits
- C. Digital components
- D. Chemical components

Answer: C

48. Location-based AR apps help users by:

- A. Playing games
- B. Showing advertisements
- C. Providing real-time information about places
- D. Programming devices

Answer: C

49. AR differs from VR because AR:

- A. Creates a new world
- B. Eliminates reality
- C. Alters perception of existing physical world
- D. Is non-interactive

Answer: C

Robotics

50. A robot is a machine capable of:

- A. Thinking like humans only
 - B. Carrying out tasks automatically
-

- C. Performing manual labour only
- D. Storing data

Answer: B

51. Robots are different from other machines because they are:

- A. Bigger
- B. Faster
- C. Programmable by computers
- D. Wireless

Answer: C

52. Robots were initially developed for tasks that are:

- A. Creative
- B. Repetitive, boring or stressful
- C. Artistic
- D. Theoretical

Answer: B

53. Sensors are:

- A. Optional parts of robots
- B. Prime components of robots
- C. Decorative parts
- D. Software only

Answer: B

54. Robots that resemble humans are called:

- A. Drones
- B. Manipulators
- C. Humanoids
- D. Wheeled robots

Answer: C

55. Robotics is an interdisciplinary field involving:

- A. Only computer science
- B. Mechanical engineering, electronics and computer science
- C. Biology only
- D. Physics only

Answer: B

56. NASA's Mars Exploration Rover is an example of:

- A. AI assistant
- B. Robotic space mission
- C. Drone
- D. Humanoid

Answer: B

57. Sophia is a:

- A. Drone
- B. Software
- C. Humanoid robot
- D. Spacecraft

Answer: C

58. Drones are:

- A. Manned aircraft
- B. Unmanned aircraft
- C. Ground vehicles
- D. Submarines

Answer: B

59. Drones can fly autonomously using:

- A. Human signals only
- B. Software-controlled flight plans
- C. Manual steering only
- D. Wired connections

Answer: B

60. Drones use onboard sensors along with:

- A. Bluetooth
- B. Wi-Fi
- C. GPS
- D. Infrared only

Answer: C

61. Drones are used in all EXCEPT:

- A. Disaster management
- B. Wildlife monitoring
- C. Agriculture
- D. Book printing

Answer: D

Big Data (3.3)

62. Data is being produced at a colossal rate mainly because:

- A. Computers are faster
- B. Technology is entering almost every sphere of life
- C. Storage devices are cheaper
- D. Internet speed has reduced

Answer: B

63. Today, the number of Internet users worldwide is over:

- A. One million
- B. One crore
- C. One billion
- D. One trillion

Answer: C

64. A majority of the world's web traffic comes from:

- A. Desktop computers
- B. Laptops
- C. Tablets
- D. Smartphones

Answer: D

65. Approximately how much data is created each day at the current pace?

- A. 2.5 million bytes
- B. 2.5 billion bytes
- C. 2.5 trillion bytes
- D. 2.5 quintillion bytes

Answer: D

66. The increasing pace of data generation is strongly linked to:

- A. Cloud Computing
- B. Artificial Intelligence
- C. Internet of Things (IoT)
- D. Robotics

Answer: C

67. Data sets of enormous volume and complexity are called:

- A. Traditional Data
- B. Structured Data
- C. Big Data
- D. Simple Data

Answer: C

68. Big Data cannot be processed using traditional tools because it is:

- A. Only numerical
- B. Very small
- C. Voluminous and unstructured
- D. Stored offline

Answer: C

69. Which of the following is an example of unstructured data?

- A. DBMS tables
- B. Spreadsheet data
- C. Tweets and instant messages
- D. Relational records

Answer: C

70. Which of the following is NOT mentioned as a source of Big Data?

- A. Social media posts
- B. Photographs
- C. Audio/video chats
- D. Printed books

Answer: D

71. Big Data challenges include all EXCEPT:

- A. Storage
- B. Visualisation
- C. Integration
- D. Compilation

Answer: D

72. Big Data sometimes contains information that is:

- A. Always useless
- B. Of high business value
- C. Only academic
- D. Always incorrect

Answer: B

73. There is keen effort to process Big Data mainly because it:

- A. Saves electricity
- B. Is easy to analyse
- C. Contains valuable knowledge
- D. Is legally required

Answer: C

Characteristics of Big Data (5 Vs)

74. How many key characteristics distinguish Big Data from traditional data?

- A. Three
- B. Four
- C. Five
- D. Six

Answer: C

75. The characteristic referring to the enormous size of data is:

- A. Velocity
- B. Variety
- C. Volume
- D. Veracity

Answer: C

76. A dataset difficult to process using traditional DBMS tools due to size is termed:

- A. Structured data
- B. Relational data
- C. Big Data
- D. Metadata

Answer: C

77. The rate at which data is generated and stored is called:

- A. Volume
- B. Velocity
- C. Value
- D. Veracity

Answer: B

78. Big Data has _____ rate of generation compared to traditional data.

- A. Lower
- B. Equal
- C. Slightly higher
- D. Exponentially higher

Answer: D

79. The presence of different types of data is referred to as:

- A. Volume
- B. Velocity
- C. Variety
- D. Value

Answer: C

80. Which of the following is an example of data variety?

- A. Only numbers
- B. Only text
- C. Text, images and videos
- D. Only databases

Answer: C

81. Veracity in Big Data refers to:

- A. Size of data
- B. Speed of data
- C. Trustworthiness of data
- D. Value of data

Answer: C

82. Processing incorrect or noisy data may:

- A. Improve results
- B. Reduce storage
- C. Mislead interpretations
- D. Increase speed

Answer: C

83. The characteristic that focuses on usefulness and business potential is:

- A. Volume
- B. Velocity
- C. Veracity
- D. Value

Answer: D

84. Before processing Big Data, organisations should:

- A. Ignore cost
- B. Make preliminary enquiry for value discovery
- C. Store everything permanently
- D. Avoid analysis

Answer: B

Data Analytics (3.3.2)

85. Data analytics is the process of:

- A. Collecting data only
- B. Storing data
- C. Examining data sets to draw conclusions
- D. Deleting data

Answer: C

86. Data analytics uses:

- A. Manual calculations
- B. Specialised systems and software
- C. Hardware tools only
- D. Paper-based analysis

Answer: B

87. Data analytics is widely used in commercial industries to:

- A. Reduce staff
- B. Improve networking
- C. Make informed business decisions
- D. Replace hardware

Answer: C

88. In science and technology, data analytics helps to:

- A. Create advertisements
- B. Verify or disprove theories
- C. Design hardware
- D. Build networks

Answer: B

89. Pandas is a:

- A. Hardware device
- B. Database
- C. Python library
- D. Operating system

Answer: C

90. Pandas is mainly used to:

- A. Design websites
- B. Perform data analysis easily
- C. Create animations
- D. Manage networks

Answer: B

Internet of Things (IoT – 3.4)

91. A traditional computer network consists of:

- A. Only servers
- B. Only desktops
- C. Computing devices connected via wire or wireless
- D. Only smartphones

Answer: C

92. Communication between network devices happens using:

- A. Bluetooth only
- B. LAN or Internet
- C. SMS
- D. Infrared

Answer: B

93. IoT imagines everyday objects like bulbs and fans becoming:

- A. Offline devices
- B. Manual tools
- C. Part of a network
- D. Programming units

Answer: C

94. Internet of Things is defined as:

- A. Network of computers only
- B. Network of devices with embedded hardware and software
- C. Network of websites
- D. Network of humans

Answer: B

95. IoT devices can:

- A. Only store data
- B. Communicate and exchange data
- C. Only receive commands
- D. Work without software

Answer: B

96. Currently, most household devices are used:

- A. Collaboratively
- B. Automatically
- C. In isolation
- D. Without electricity

Answer: C

97. IoT aims to make devices:

- A. Independent
- B. Competitive
- C. Work collaboratively
- D. Offline

Answer: C

98. Which device can be remotely controlled using IoT?

- A. Microwave oven
- B. Air conditioner
- C. Door lock
- D. All of the above

Answer: D

Web of Things (WoT – 3.4.1)

99. Installing different apps for different devices creates a need for:

- A. More storage
- B. Single unified interface
- C. More hardware
- D. Faster processors

Answer: B

100. Web of Things uses _____ to connect physical objects.

- A. Bluetooth
- B. Web services

- C. SMS
- D. Infrared

Answer: B

101. WoT enables:

- A. Only human communication
- B. Only device communication
- C. Interaction of physical things via web
- D. Offline control

Answer: C

102. Web of Things will help in creating:

- A. Smart homes and smart cities
- B. Gaming consoles
- C. Social networks
- D. Databases

Answer: A

Sensors (3.4.2)

103. Screen orientation change in smartphones is detected using:

- A. Camera
- B. GPS
- C. Accelerometer and Gyroscope
- D. Microphone

Answer: C

104. Accelerometer detects:

- A. Speed
- B. Orientation
- C. Sound
- D. Temperature

Answer: B

105. Gyroscope sensor tracks:

- A. Light
- B. Pressure
- C. Rotation or twist
- D. Distance

Answer: C

106. Sensors act as:

- A. Storage units
- B. Monitoring and observing elements
- C. Display devices
- D. Output units

Answer: B

107. Smart electronic sensors contribute significantly to:

- A. AI
- B. Robotics
- C. Evolution of IoT
- D. Cloud computing

Answer: C

108. A smart sensor processes data:

- A. After sending it
- B. Before passing it on
- C. Without computing
- D. Only manually

Answer: B

Smart Cities (3.4.3)

109. Rapid urbanisation increases load on cities in terms of:

- A. Resources and infrastructure
- B. Entertainment
- C. Education only
- D. Tourism

Answer: A

110. Smart city planning uses:

- A. Only civil engineering
- B. Manual labour
- C. Computer and communication technology with IoT
- D. Only software

Answer: C

111. Smart buildings use sensors to detect:

- A. Rainfall
- B. Earthquake tremors
- C. Wind speed
- D. Temperature

Answer: B

112. Smart bridges detect problems like:

- A. Traffic jams
- B. Loose bolts and cracks
- C. Noise pollution
- D. Power failure

Answer: B

113. Alerts from smart bridges are sent via:

- A. Email
- B. SMS
- C. Phone calls
- D. Newspapers

Answer: B

114. Smart tunnels use sensors to detect:

- A. Decoration issues
- B. Leakage or congestion
- C. Lighting problems
- D. Colour fading

Answer: B

115. Data from sensor nodes is sent to:

- A. Mobile phone only
- B. Local storage
- C. Centralised computer
- D. Printer

Answer: C

116. Smart city systems aim to optimise:

- A. Entertainment
- B. Advertising
- C. Efficiency of city operations and services
- D. Population growth

Answer: C

117. Cloud computing is an emerging trend in the field of

- A. Mechanical engineering
- B. Civil engineering
- C. Information technology
- D. Electrical engineering

118. Cloud computing delivers computer-based services over the

- A. LAN
- B. MAN
- C. Internet
- D. Bluetooth

119. Cloud services can be accessed

- A. Only from offices
- B. Only through computers
- C. From anywhere using any device
- D. Only from servers

120. Which of the following is included in cloud services?

- A. Software
- B. Hardware (servers)
- C. Databases and storage
- D. All of the above

121. Companies that provide cloud resources are known as

- A. Internet providers
- B. Software vendors
- C. Cloud service providers
- D. Network administrators

122. Cloud service providers usually charge users

- A. One-time fee
- B. Yearly tax

- C. Pay per use
- D. No cost

123. The cloud service payment model is similar to paying for

- A. Mobile recharge
- B. Electricity usage
- C. Cable TV
- D. Rent

124. Which of the following is an example of cloud usage?

- A. Saving files on hard disk
- B. Installing OS locally
- C. Storing photos online as backup
- D. Using offline software

125. Cloud computing allows users to run large applications

- A. Without internet
- B. Without owning high-end hardware
- C. Only on supercomputers
- D. Only in offices

126. To use cloud computing, a user must be connected to

- A. LAN only
- B. Bluetooth
- C. Internet
- D. USB

127. One major advantage of cloud computing is

- A. High setup cost
- B. Fixed resources
- C. Cost-effective on-demand resources
- D. Limited access

128. Cloud computing allows users to avail resources

- A. Permanently
- B. Randomly
- C. As per need
- D. Only yearly

3.5.1 Cloud Services

129. In cloud computing, everything is interpreted as a

- A. Product
- B. License
- C. Service
- D. Program

130. A “service” in cloud computing refers to

- A. Internet speed
- B. Any facility provided by the cloud

- C. Software update
- D. Security patch

131. Cloud computing services are categorized into

- A. Two models
- B. Three models
- C. Four models
- D. Five models

132. Which of the following is NOT a standard cloud service model?

- A. IaaS
 - B. PaaS
 - C. SaaS
 - D. DaaS
-

Infrastructure as a Service (IaaS)

133. IaaS primarily provides

- A. Application software
- B. Programming tools
- C. Computing infrastructure
- D. End-user services

134. Which of the following can be provided by IaaS?

- A. Servers
- B. Virtual machines
- C. Network components
- D. All of the above

135. In IaaS, hardware infrastructure is located

- A. On user's PC
- B. On mobile devices
- C. At a remote location
- D. In schools

136. Using IaaS, users can

- A. Only store data
- B. Configure and execute applications
- C. Use software without control
- D. Avoid internet usage

137. IaaS helps save cost related to

- A. Only hardware
- B. Only software
- C. Setup, maintenance, and security
- D. Internet subscription

138. In IaaS, users pay

- A. Fixed salary
- B. Subscription only

- C. As per usage
 - D. No charges
-

Platform as a Service (PaaS)

- 139.** PaaS provides users with
- A. Physical servers
 - B. Platform to develop and deploy applications
 - C. End-user applications
 - D. Internet services
- 140.** In PaaS, users do NOT need to worry about
- A. Writing code
 - B. Application logic
 - C. Underlying infrastructure
 - D. Application configuration
- 141.** PaaS is mainly designed for
- A. End users
 - B. Developers
 - C. Network engineers
 - D. Data entry operators
- 142.** The example web application mentioned uses
- A. Java and Oracle
 - B. PHP and MongoDB
 - C. Python and MySQL
 - D. C++ and SQL
- 143.** In PaaS, Apache server is
- A. Installed manually
 - B. Pre-configured
 - C. Not supported
 - D. Installed locally
- 144.** PaaS reduces complexity of
- A. Coding
 - B. Buying and managing hardware/software
 - C. Testing applications
 - D. Designing UI
- 145.** In PaaS, control over deployed applications lies with
- A. Cloud provider
 - B. Government
 - C. User
 - D. Internet provider
-

Software as a Service (SaaS)

146. SaaS provides on-demand access to

- A. Hardware
- B. Platform
- C. Application software
- D. Operating systems

147. SaaS generally requires

- A. No payment
- B. Licensing or subscription
- C. Hardware purchase
- D. Source code access

148. Which of the following is an example of SaaS?

- A. Google Docs
- B. Microsoft Office 365
- C. Dropbox
- D. All of the above

149. While using SaaS, users are NOT concerned about

- A. Editing documents
- B. Software installation
- C. Internet access
- D. Saving files

150. Like PaaS, SaaS provides users access to

- A. Hardware control
- B. Configuration settings of the application
- C. Source code
- D. Network setup

Government Initiative

151. The Government of India's cloud initiative is known as

- A. Digital India
- B. MeghRaj
- C. BharatNet
- D. e-Governance

152. GI Cloud stands for

- A. Global Internet Cloud
- B. Government Infrastructure Cloud
- C. Government of India Cloud
- D. General Information Cloud

3.6 Grid Computing

153. A grid is a network of

- A. Similar computers
- B. Mobile devices only

- C. Geographically dispersed heterogeneous resources
- D. Single server

154. Unlike cloud computing, grid computing is mainly

- A. Service-oriented
- B. Application-specific
- C. Storage-based
- D. Internet-free

155. Grid computing creates the sense of a

- A. Virtual LAN
- B. Virtual database
- C. Virtual supercomputer
- D. Virtual cloud

156. Individual resources in a grid are called

- A. Servers
- B. Clients
- C. Nodes
- D. Routers

157. Grid nodes come together to

- A. Store data permanently
- B. Solve a single large task
- C. Host websites
- D. Provide SaaS

158. Grid computing helps solve problems without

- A. Software
- B. Internet
- C. Procuring costly hardware
- D. Security

Types of Grid

159. Data grid is used to

- A. Process images
- B. Manage large distributed data
- C. Provide cloud services
- D. Run OS

160. CPU or Processor grid focuses on

- A. Data backup
- B. Sequential processing
- C. Parallel processing
- D. Storage only

Grid vs Cloud

161. In IaaS cloud service, infrastructure is

- A. Shared freely
- B. Rented from a provider
- C. Donated by users
- D. Government-owned

162. In grid computing, resources

- A. Are rented
- B. Are centrally controlled
- C. Join together for a common task
- D. Are permanently owned

Middleware & Globus Toolkit

163. Middleware in grid computing is required to

- A. Design UI
- B. Implement distributed processor architecture
- C. Write applications
- D. Store files

164. Globus toolkit is

- A. Paid antivirus
- B. Hardware device
- C. Open-source grid software toolkit
- D. Operating system

165. Globus toolkit provides support for

- A. Security
- B. Resource management
- C. Fault detection
- D. All of the above

3.7 Blockchain Technology

166. Traditional digital transactions use a

- A. Distributed ledger
- B. Centralized database
- C. Blockchain
- D. Grid system

167. A major risk of centralized databases is

- A. High speed
- B. Easy access
- C. Data hacking or loss
- D. Low cost

168. Blockchain technology uses a

- A. Centralized database
- B. Decentralized shared database

- C. Single server
- D. Private storage

169. In blockchain, each computer has

- A. Partial data
- B. No data
- C. A full copy of the database
- D. Only headers

170. A block in blockchain represents

- A. Virus
- B. Hardware unit
- C. Secured chunk of data
- D. Server

171. Blockchain ledger is

- A. Editable
- B. Temporary
- C. Append-only
- D. Offline

172. A transaction is added to blockchain only after

- A. One node approves
- B. Owner approves
- C. All nodes authenticate
- D. Government approves

173. Blockchain security is ensured because

- A. Data is hidden
- B. One authority controls it
- C. Every node stores a copy
- D. Internet is fast

Applications of Blockchain

174. The most popular application of blockchain is

- A. Web hosting
- B. Digital currency
- C. Email services
- D. Cloud storage

175. Blockchain promotes

- A. Monopoly
- B. Secrecy
- C. Transparency and accountability
- D. Central control

176. In healthcare, blockchain improves

- A. Hospital size
- B. Data sharing and diagnosis accuracy

- C. Paperwork
- D. Manual records

177. Blockchain can help land registration by reducing

- A. Internet use
- B. Ownership disputes
- C. Storage cost
- D. Tax burden

178. Blockchain-based voting systems ensure

- A. Faster voting only
- B. Vote alteration
- C. Transparency and authenticity
- D. Manual counting

179. Blockchain technology can be applied in

- A. Banking
- B. Media
- C. Telecom and travel
- D. All of the above
