

1. What does the “flow of control” in a program mean?

- A. The way statements are executed in an order
- B. The speed at which Python executes statements
- C. The memory allocated to variables
- D. The number of functions used in a program

2. Which of the following are types of control structures in Python?

- A. Sequence and Recursion
- B. Selection and Repetition
- C. Arithmetic and Logical
- D. Input and Output

3. What is the purpose of the if statement in Python?

- A. To repeat a set of statements
- B. To make decisions based on conditions
- C. To define a function
- D. To input data from the user

4. In an if..else statement, when is the else block executed?

- A. Only when the condition is true
- B. Only when the condition is false
- C. Always
- D. Never

5. What is the output of the following code if the user enters age = 17?

```
age = int(input("Enter your age: "))
```

```
if age >= 18:
```

```
    print("Eligible to vote")
```

```
else:
```

```
    print("Not eligible to vote")
```

A. Eligible to vote

B. Not eligible to vote

C. Error

D. None

6. What is the purpose of the elif statement?

- A. To execute loops
- B. To chain multiple conditions after an if statement
- C. To define a function
- D. To input values from the user

7. How does Python indicate a block of statements under a selection or loop?

- A. Using curly braces {}
- B. Using indentation (spaces or tabs)
- C. Using semicolons ;
- D. Using parentheses ()

- 8.** What will happen if indentation is not correct in Python?
- A. Program will execute correctly
 - B. Python will throw a syntax error
 - C. Program will run slowly
 - D. Program will ignore indentation
- 9.** Which of the following is an example of repetition in nature mentioned in the text?
- A. A bus following a road
 - B. Butterfly life cycle
 - C. Voting process
 - D. Buying a pen
- 10.** What is iteration in programming?
- A. Writing a program once
 - B. Repetition of a set of statements based on a condition
 - C. Defining multiple functions
 - D. Checking multiple inputs
- 11.** In a loop, what is the role of the control variable?
- A. To input data from the user
 - B. To determine when the loop terminates
 - C. To store results of arithmetic operations
 - D. To print output
- 12.** Which of the following are the two looping constructs in Python?
- A. if and else
 - B. for and while
 - C. break and continue
 - D. try and except
- 13.** What will happen if a loop's exit condition is never met?
- A. The loop will terminate automatically
 - B. The program will run an infinite loop
 - C. The loop will execute only once
 - D. Python will throw an error
- 14.** Which of the following best describes the difference between sequence and selection?
- A. Sequence executes statements in order; selection executes statements based on a condition
 - B. Sequence executes statements based on a condition; selection executes statements in order
 - C. Both execute statements based on a condition
 - D. Both execute statements in a fixed order
- 15.** What is the purpose of the break statement?
- A. To skip the current iteration of a loop
 - B. To terminate the loop and move to the statement after the loop
 - C. To restart the loop
 - D. To create nested loops

16. What happens when the continue statement is executed?

- A. Terminates the loop immediately
- B. Skips remaining statements in the current iteration and moves to next iteration
- C. Skips all iterations of the loop
- D. Exits the program

17. What is a nested loop?

- A. A loop inside another loop
- B. A loop that executes only once
- C. A loop that has break inside
- D. A loop that has continue inside

18. How many levels of nesting does Python allow in loops?

- A. Only one level
- B. Only two levels
- C. No restriction on levels of nesting
- D. Only three levels

19. Which statement about loops is correct?

- A. for loops can't be nested
- B. while loops can't use break or continue
- C. Loops can execute repeatedly based on a condition
- D. Nested loops are not allowed in Python

20. What is the difference between break and continue statements?

- A. Both terminate the loop
- B. break terminates the loop; continue skips current iteration
- C. break skips iteration; continue terminates loop
- D. Both skip current iteration
