

Introduction & Modular Programming

1. As a program becomes complex, what generally happens to the number of lines of code?
 - A) It decreases
 - B) It remains the same
 - C) It increases
 - D) It becomes unpredictable
 2. A bulky program is difficult to manage mainly because it:
 - A) Executes slowly
 - B) Becomes hard to read and modify
 - C) Uses more memory
 - D) Produces errors
 3. The tent described in the chapter has which shape?
 - A) Rectangular
 - B) Spherical
 - C) Cylindrical with a conical top
 - D) Cubical
 4. Which of the following is NOT a task performed by the company to calculate tent price?
 - A) Accepting dimensions
 - B) Calculating canvas area
 - C) Calculating employee salary
 - D) Adding tax
 5. Dividing a program into independent blocks with specific tasks is called:
 - A) Compilation
 - B) Debugging
 - C) Modular programming
 - D) Interpretation
 6. The main benefit of modular programming is:
 - A) Faster hardware
 - B) Reduced syntax errors
 - C) Better organisation and reusability
 - D) Less memory usage
-

Functions – Basics

7. A function can be best defined as:
 - A) A loop that repeats code
 - B) A named group of instructions performing a specific task
 - C) A variable storing values
 - D) A comment block
8. Once a function is defined, it can be:
 - A) Used only once
 - B) Used only inside main program

- C) Called multiple times
 - D) Used only for calculations
9. Which keyword is used to define a function in Python?
- A) func
 - B) define
 - C) def
 - D) function
10. A function is executed only when it is:
- A) Defined
 - B) Imported
 - C) Called
 - D) Compiled
11. The program rewritten using functions appears more:
- A) Lengthy
 - B) Complex
 - C) Organised
 - D) Slower
-

Advantages of Functions

12. Which of the following is an advantage of using functions?
- A) Increases code length
 - B) Decreases readability
 - C) Improves reusability
 - D) Prevents logical errors
13. Functions help in debugging mainly because:
- A) Errors disappear automatically
 - B) Code is shorter and structured
 - C) Python ignores errors
 - D) Execution stops
14. Reusing existing code without rewriting it improves:
- A) Memory usage
 - B) Execution speed
 - C) Reusability
 - D) Compilation
15. Functions allow team members to work:
- A) Sequentially
 - B) Independently
 - C) Only under supervision
 - D) Only on main program
-

User Defined Functions

16. Functions written by programmers to meet specific requirements are called:
- A) Built-in functions
 - B) Library functions
 - C) User defined functions
 - D) System functions
17. A function header always ends with:
- A) Semicolon
 - B) Full stop
 - C) Colon
 - D) Comma
18. Parameters in a function are:
- A) Mandatory
 - B) Optional
 - C) Always numeric
 - D) Always strings
19. Statements outside the function indentation are:
- A) Part of the function
 - B) Executed inside function
 - C) Not part of the function
 - D) Ignored by Python
-

Function Call & Arguments

20. A function is called by writing:
- A) Function name only
 - B) Function name followed by parameters
 - C) Function name followed by parentheses
 - D) Parameters only
21. A value passed during function call is called:
- A) Parameter
 - B) Variable
 - C) Argument
 - D) Identifier
22. The variable listed in function definition is known as:
- A) Argument
 - B) Parameter
 - C) Constant
 - D) Literal
23. During execution, argument and parameter:
- A) Refer to different values
 - B) Have different identities
 - C) Refer to the same value
 - D) Cannot be compared

24. The id() function is used to:
- A) Change values
 - B) Compare variables
 - C) Find memory identity
 - D) Delete objects
-

Immutable Objects & Identity

25. When an integer parameter is modified inside a function, its id:
- A) Remains same
 - B) Always decreases
 - C) Changes
 - D) Becomes undefined
26. Integers in Python are:
- A) Mutable
 - B) Immutable
 - C) Editable
 - D) Temporary
-

Functions with Different Data Types

27. Which data type can be passed as a parameter to a function?
- A) Only integers
 - B) Only strings
 - C) Only lists
 - D) Any valid data type
28. Concatenation of strings inside a function is done using:
- A) ,
 - B) *
 - C) +
 - D) %
-

Default Parameters

29. A default parameter is used when:
- A) Function has no arguments
 - B) Argument is not provided
 - C) Function returns nothing
 - D) Program ends
30. Default parameters must be:
- A) First in function header
 - B) Middle parameters
 - C) Trailing parameters
 - D) Optional anywhere

31. Which function header is correct?
- A) def func(a=5, b):
 - B) def func(a, b=5):
 - C) def func(a=5, b):
 - D) def func(b, a=5):
32. An argument passed as an expression is:
- A) Not allowed
 - B) Evaluated after function call
 - C) Evaluated before function call
 - D) Ignored
-

Return Statement

33. A function that does not return a value is called:
- A) Null function
 - B) Void function
 - C) Empty function
 - D) Recursive function
34. The return statement transfers control:
- A) To next line only
 - B) To interpreter
 - C) Back to calling function
 - D) To main memory
35. Multiple values are returned from a function using:
- A) List
 - B) Dictionary
 - C) Tuple
 - D) Set
-

Types of Functions

36. Which of the following is a valid type of function?
- A) Function with arguments and return value
 - B) Function without arguments and without return value
 - C) Function with arguments and no return value
 - D) All of the above
-

Flow of Execution

37. Python executes statements in which order by default?
- A) Bottom to top
 - B) Random
 - C) Top to bottom
 - D) Based on indentation

38. When a function definition is encountered:

- A) It is executed immediately
- B) It is ignored
- C) It is stored for later use
- D) It causes error

39. A function must be defined:

- A) After the call
- B) Before the call
- C) Inside another function
- D) In a separate file

40. Calling a function before defining it causes:

- A) Syntax error
 - B) Runtime error
 - C) NameError
 - D) Logical error
-

Scope of Variables

41. The part of a program where a variable is accessible is called:

- A) Lifetime
- B) Scope
- C) Range
- D) Memory

42. A variable defined outside all functions is called:

- A) Local variable
- B) Static variable
- C) Global variable
- D) Temporary variable

43. A local variable exists:

- A) Throughout the program
- B) Till system shutdown
- C) Only during function execution
- D) Forever

44. Accessing a local variable outside its function causes:

- A) Syntax error
- B) Runtime error
- C) NameError
- D) Logical error

45. To modify a global variable inside a function, we use:

- A) static
- B) extern
- C) global
- D) define

Python Standard Library

46. Python standard library is a collection of:
- A) User programs
 - B) Built-in modules and functions
 - C) Only loops
 - D) Only variables
47. Built-in functions are:
- A) Written by user
 - B) Defined in Python interpreter
 - C) Stored in text files
 - D) Imported externally
48. Which of the following is a built-in function?
- A) addnum()
 - B) sqrt()
 - C) input()
 - D) myFunc()
49. A function that accepts input and returns a value is:
- A) print()
 - B) input()
 - C) len()
 - D) range()

Modules

50. A module is a collection of:
- A) Variables
 - B) Classes only
 - C) Functions
 - D) Comments
51. A module is stored as a file with extension:
- A) .txt
 - B) .exe
 - C) .py
 - D) .mod
52. Which statement imports a module?
- A) include math
 - B) using math
 - C) import math
 - D) load math
53. To call a function from a module, we use:
- A) function()
 - B) module::function()

- C) module.function()
 - D) function.module()
-

Built-in Modules

- 54. Which module contains mathematical functions?
 - A) random
 - B) math
 - C) statistics
 - D) sys
- 55. Which function returns the smallest integer greater than or equal to a number?
 - A) floor()
 - B) trunc()
 - C) ceil()
 - D) fabs()
- 56. Which module is used to generate random numbers?
 - A) statistics
 - B) math
 - C) random
 - D) numbers
- 57. The statistics module is used for:
 - A) Random numbers
 - B) Mathematical constants
 - C) Statistical calculations
 - D) File handling
